### DETAILED ACTION

1. Claims 1-5, 7-14 and 16-19 are pending. Claims 6 and 15 have been cancelled.

#### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-2, 10-11 and 19 rejected under 35 U.S.C. 102(b) as being anticipated by Klug et al. (Klug), U.S. Patent No. 5,790,785.

As per claims 1-2, 10-11 and 19:

Klug discloses a method comprising:

generating a user registration page request by a user of a web application and forwarding the user registration page request to an application server (4:41-54);

By the application server, embedding security data requirements in the user registration page request and forwarding the user registration page request to a user registration page of the web application (7:26-45, fig. 2B);

By the user registration page of the web application, merging the security data requirements from the application server with the user profile registration requirements of the web application to form a user information request page (7:61-8:19, fig. 3);

Sending the user information request page from the web application to the user (8:44-66).

Art Unit: 2132

returning a filled out user information request page to a pass through server target on the application server (9:7-28);

extracting security data from the filled out user information page by the application server and bootstrapping a user account in the user database by the application server based upon the extracted security data . Klug discloses the use of an ID and password, provided by the user, to initiate a new user account in the database (4:54-58, fig. 2A, item 236), which meets the limitation of bootstrapping a user account in the user database by the application server based upon the extracted security data.

### ***Claim Rejections - 35 USC § 103***

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

3. Claims 3-5, 7-9, 12-14 and 16-18 rejected under 35 U.S.C. 103(a) as being unpatentable over Klug et al. (Klug), U.S. Patent No. 5,790,785 as applied to claims 1 and 10 above and further in view of Levergood et al. (Levergood), U.S. Patent No. 5,708,780.

As per claims 3 and 12:

Levergood substantially teaches that "the authentication server checks to see if the user qualifies for a new account" (see column 6, line 67 -column 7, line 3), meeting the limitation of making available a set of user security requirements.

As per claims 4-5 and 13-14, Levergood substantially teaches a success target and a failure target to provide respective destinations for the bootstrap attempt. These targets are disclosed as URLs capable of being shown in a browser (see Figure 2B; column 7, lines 51-67).

Art Unit: 2132

As per claims 7-9 and 16-18, Levergood substantially teaches merging the set of security registration requirements and user profile data requirements to collect corresponding user profile data from the user. They are forwarded back, extracted, and stored in a user profile database (see column 6, line 58 - column 7, line 14).

It would have been obvious to one of ordinary skill in the art at the time of applicant's invention to modify the invention of Klug to include the access control of Levergood in order to increase the security already utilized for the users attempting to access the third party websites as described by Klug (10:31-11:11). Klug already uses a form of access control, however, not to the extent of using session identifiers which would make the security of the users ID and password, that stronger.
